INDEX

Aberdeen and Cheto clays, comparison of 463

Absorption
bands
ammonium, in anhydrous layer silicates 134
hydroxyl, of various samples 123
water, in Mg-hectorite 134
hydroxyl stretching, of soil clays 138, 139
spectrometry, infrared, in clay studies 121

Adsorbed
ethanol as function of evacuation time for homoionic montmorillonite 269
water
in biotite, infrared absorption spectra of 386
partial molar free energy of, for Na- and Ca-montmorillonite 222

Adsorbents, chromatographic, application as 423

Adsorption
amines with methanol 288
complexes, organic, of tetracalcium aluminate hydrate 279
-desorption of montmorillonite 260
-isotherm studies on montmorillonite 267

Aerogel cylinders
of bentonite and CMC, compression and elastic recovery of 430
bulk density of 429, 432
of polyelectrolytes, compression and elastic recovery of 428
reinforced potential applications of 433

Aerogels
bentonite and bentonite/sodium carboxymethylcellulose 429
chopped, bulk density of 429, 432
clay 424
polyelectrolyte 427
effect of salt on strength of 431
polyelectrolyte reinforced, of clays 423
preparation and properties of 426

Alcohol
arrangement in C₄AHₓ-complexes 281
-complexes of C₄AHₓ and montmorillonite, comparison of 282

Alcohol-water interactions on montmorillonite surfaces, 1. Ethanol, by R. H. Dowdy and M. M. Mortland 259

Alkali metal ratios in natural waters 209
variations, diagenetic cycle of natural waters inferred from 212
Alkaline solution on the alteration of clay minerals, influence of 293
Alkylation of tetracalcium aluminate hydrate 291

Allophane
formation of zeolite type A from 185
quantitative determination of 397
of saprolite clays 404

Alteration of clay minerals, influence of alkaline solution on 293
Aluminate tetracalcium hydrates, interlaminar reactions of 273
Aluminian montmorillonite/mica clays, weight loss vs. temperature curves for 114
Aluminum-montmorillonite, infrared spectra of 264

Amines with methanol, adsorption of 288

Ammonium
absorption bands in anhydrous layer silicates 134
hectorite film 111
and lattice hydroxyl groups from montmorillonite and beidellite, loss of 130
-montmorillonite, infrared spectra of 265

Analcime, composition and genesis of, in the Barstow Formation, San Bernardino County, California 189

Analcime deposits in the Wichita Mountains, southwestern Oklahoma (abstr.), by William H. Bellis and Charles J. Mankin 191
Analcites, structural changes in 183
Analyses, one-dimensional structural, semi-quantitative aspects of 294
Analysis
clay mineral X-ray, orienting internal standard method for 441
elemental
of andesite saprolite 397
of saprolite clays 404
Fourier transform 47
mineral, of natural zeolite deposits 187
of scattering data 324
thermogravimetric 114
Andesite saprolite
cation exchange capacity delta value of 397
clay mineralogy of 395
clays
hypersthen, differential thermal analysis of 401
Mg-saturated hypersthen, X-ray diffraction patterns of 399
Mg-saturated olivine, X-ray diffraction patterns of 400
olivine, differential thermal analysis of 402
differential thermal analysis of 397
electron microscopy of 397
X-ray diffraction of 397
Andrews, Donald E. (with Paul W. Schmidt and H. Van Olphen): X-ray study of interactions between montmorillonite platelets 321
Anhydrous
layer silicates, NH$_4$ absorption bands in 134
montmorillonite
calculated band profiles 53
observed band profiles 53
Anion, silicate, vibrations of 126
Antisymmetrical vibrations of hydroxyl groups 125
Apatite 197

Application of one-dimensional lattice model to mixed-layer muscovite-montmorillonite (abstr.), by E-an Zen 49
Argon$^{40}$/potassium$^{40}$ and heated mica ratios, chemical analysis of 379
Argon, retention of, in heated biotites 391
Arrangements, particle, in kaolin 241
Authigenic nonsilicates 197
silicates 197

Authigenic silicates formed from basaltic glass by more than 60 million years' contact with sea water, Sylvania Guyot, Marshall Islands, by R. W. Rex 195

Bailey, S. W. (with M. H. Mossman and D. H. Freas): Orienting internal standard method for clay mineral X-ray analysis 441
Balgord, W. (with Rustum Roy and A. M. Taylor): Structural changes in analcites and Na-P zeolites caused by cation exchange at room temperature and dehydration under controlled pH$_2$O (abstr.) 183
Basaltic glass
authigenic silicates formed from 195
opal spherules in 198
Beidellite
infrared spectra of 127
loss of ammonium and lattice hydroxyl groups from 130
oblique texture pattern of 22
Bellis, William H. (with Charles J. Mankin): Analcime deposits in the Wichita Mountains, Southwestern Oklahoma (abstr.) 191
Bentonite
compression and elastic recovery of aerogel cylinders of 430
/sodium carboxymethylcellulose 429
Bentonites, sodium and ammonium, weight loss vs. temperature curves for 115
Bidaohochi formation, Pliocene 36
Binary adsorption of tetracalcium aluminate hydrates 287
Biotite
fresh, chemical properties of 378
INDEX

Biotite (cont.)
heated
chemical properties of 390
physical and optical properties of 390
structural properties of 390, 391
temporal behavior of 390
infrared absorption spectra of bonded hydroxyl and adsorbed water in 386
physical and optical properties of 386
NaTPB-treated, basal surfaces of 362

Biotites
basal reflections of 388
from Blue Mountain area of Ontario 376
chemical analyses of 378
composition of 385
comparison of physical properties of 382
differential thermal and thermogravitric analyses of 387
fresh properties of 378
summary of 391
heated
chemical properties of 389
physical and optical properties of 389
retention of argon in 391
summary of 391
intermediate, properties of 384
iron and minor elements in 380
temporal behavior of 385
unit cell contents of 385
weathered
chemical properties of 384
structural properties of 387
summary of 391

Biotites intermediate between dioctahedral and trioctahedral micas, by J. Rimsaite 375

Boehmite, pulsed NMR study of the interfacial water of a disperse suspension of 145

Bonding condition; alkylation of tetra-calcium aluminate hydrate 291
Bonded hydroxyl in biotite, infrared absorption spectra of 386

BRINDLEY, G. W.: Clay mineral nomenclature 437

BRINDLEY, G. W. (with J. MENING): X-ray diffraction band profiles of montmorillonite—Influence of hydration and the exchangeable cations 51

Calcium montmorillonite
comparison of 463
comparison of pressure-resistivity curves for 462
relative resistance as function of pressure for 219
temperature 220
structural analyses 298
structural analysis diagrams for 300
-saturated vermiculite, smoothed traces of X-ray diffraction patterns of 78, 79
and Na-montmorillonite, partial molar free energy of adsorbed water for 222
California, San Bernardino County, composition and genesis of analcime in the Barstow Formation 189
Camp-Berteaux, montmorillonite from 7, 12
Carborundum, photomicrograph of 333

Cation contents of montmorillonites 129
exchange capacities, calculated and measured, of Llano vermiculite 174
capacity delta value of andesite saprolite 397
delta values for saprolite clays 405
of vermiculite 172
at room temperature, structural changes in analcites and Na-P zeolites caused by 183

Cations, exchangeable 61

Cell high pressure, and electrode, schematic diagram of 217
mass-transport described 346
experimental results 351
theory of 348
pressure-resistivity theory, mass-transport, sources of error 350
calibrations of measurements 458
diagram of 457

Cesium-montmorillonite, hydrated 57
Chabazite to hercshelite, lateral gradation of 193
Changes, visible, in macro mica particles 357
Charge characteristics and basal spacings of K+-depleted micas 153
Chemical analyses
  of biotites 378
  of Llano vermiculite 170
  of mud from Yellowstone Park 414
  of size-fractioned Llano vermiculite, results of structure calculations of 172
  of vermiculite 167
  analysis of heated micas and $\text{Ar}^{40}/\text{K}^{40}$ ratios 379
  of vermiculite 80
  characteristics of kaolin sample 352
  composition
    of biotites 385
    for Libby vermiculite 80
    of phillipsite MP43A 203
  considerations of clay minerals and oceanic evolution 209
  data
    of mud pots 412
    partial, for size-fractioned vermiculite 171
  properties
    of fresh biotite 378
    of heated biotites 389
Cheto and Aberdeen clays, comparison of 463
clay deposit, electron-optical study of alteration to smectite in 35
-montmorillonite 94
  cristobalite crystals in 96, 97
development of liquid spots in 95
Chlorite-montmorillonite, mixed layer 198
Chromatographic adsorbents, application as 423
Chrysotile
  Coalinga
    electron micrograph of 312
    frequency distribution curves of 311
    surface areas of 311
  pore-size distribution functions of 312
  samples 306
textural and surface characteristics of 315
Chrysotiles
distribution function obtained for 316, 317
origins and structural formulae of 307
pore-size distribution curves of 307
surface properties and texture of 305
theoretical pore-size distribution of 309
water adsorption isotherms of 317
Clay
  -adsorbed water, effect of thermal relationships on resistivity of 463
  aerogels 424
  complex and isotope 336
crystals in water, coherence of 255
deposition
  in column of porous media to time of suspension flow, relation of 341
  in glass beads 339
  fraction, potassium-saturated, heated 201
mineral abundance
  of illite group 416
  of kaolinite group 416
  of mixed layer group 416
  of montmorillonite group 416
minerals
  chemical considerations of 209
  influence of alkaline solution on alteration of 293
  in mud pots, sequence of formation of 418
X-ray analysis, orienting internal standard method for 441
-polyelectrolyte aerogels 427
potassium-saturated, X-ray diffraction patterns of 200
potassium-treated, compared with magnesium-saturated air-dried clay fraction 201
under pressure, water unfrozen in 223
and sodium metaphosphate concentrations in samples of montmorillonite 323
structures and reactions, characterization of 128
systems, interstratified 450
-water systems, influence of pressure on electrical resistivity of 455
Clay mineral formation in mud pots, Yellowstone Park, Wyoming, by John B. Droste 409
Clay mineral nomenclature, by G. W. Brindley 437
Clay mineralogy of andesite saprolite, by D. M. Hendricks, L. D. Whittig, and M. L. Jackson 395
Clay minerals and oceanic evolution, by Robert C. Harriss 207
Clays, cyclothemic, homogeneity of 452
Clays
  and associated minerals, Mössbauer parameters determined for 144
INDEX

Clays (cont.)
soil
  hydroxyl stretching absorption of 138, 139
  infrared spectra of 137
Coalinga chrysotile
electron micrograph of 312
  frequency distribution curves of 311
  surface areas of 311
Coherence of clay crystals in water
  (abstr.), by W. W. Emerson 255
Colorado I/M and Salona I(-bentonite,
  X-ray diffraction patterns of 73
Complex viscoelastic parameters 230
Composition and genesis of analcime
  in the Barstow Formation, San
Bernardino County, California
  (abstr.), by Arthur J. Gude, 3d and
  Richard A. Sheppard 189
Compositional variation of a vermiculite
  as related to particle size, by
  Raymond L. Kerns, Jr. and Charles
  J. Mankin 163
Compounds
  with negatively charged sheets 277
  with neutral sheets 277
Compression of aerogel cylinders
  of bentonite and CMC 430
  of polyelectrolytes 428
Conductance of frozen montmorillonite
  suspensions, pressure effects on 215
  Cone-plate assembly, schematic diagram
  of 233
Cu-montmorillonite, infrared spectra of 263
Creep and relaxation functions 229
Cristobalite
  crystals in Cheto montmorillonite 96, 97
  and mullite in Wyoming montmorill-
  onite, contrast development of 99
Crystal surface, phillipsite, replica of 199
Crystallites, montmorillonite, size and
  shape of 27
Crystals
  clay, coherence of in water 255
  cristobalite, in Cheto montmorillonite
  96, 97
  mica, X-ray diffraction effects by 47
  twinned water-clear phillipsite 199
Curry, R. Bruce
  Deposition of montmorillonite from
  suspension during flow through porous media, by R. Bruce Curry 331
Data, high resolution diffraction 21
Decomposition of illite, variation in 91
Dehydration under controlled pH2O,
  structural changes in analcites and
  Na-P zeolites caused by 183
Densities, bulk, of aerogel cylinders and
  chopped aerogels of polyelectrolytes 429
Depletion, potassium, visible changes in
  macro mica particles that occur with 357
Deposition of montmorillonite from
  suspension during flow through porous media, by R. Bruce Curry 331
Deposits, natural zeolite, mineral analysis of 187
Desorption-adsorption of montmorillonite
  260
Diagenetic cycle of natural waters inferred
  from alkali metal variations 212
Dickite, layer sequence notation for 438
Differential thermal analysis
  of biotites 387
  of andesite saprolite 397
  of hypersthene andesite saprolite clays 401
  of olivine andesite saprolite clays 402
  patterns of Llano vermiculite 169
  of vermiculite 167
Diffraction
  band profiles 52
  pattern of a-b plane of illite 90
  in Marblehead illite 93
  of mica-montmorillonite 71
  of sodic montmorillonite 96

of Colorado I/M and Salona K-
bentonite 73
of potassium-saturated clay 200
traces of dioctahedral vermiculite
VMI 155, 156, 157
studies of montmorillonite 266

X-ray study of interactions between
montmorillonite platelets, by Don-
ald E. Andrews, Paul W. Schmidt,
and H. van Olphen 321

X-ray diffraction band profiles of
montmorillonite—Influence of
hydration and of the exchangeable
cations, by J. Mering and G. W.
Brindley 51

Xylenes of pyridine bentonite, separation
of 434

Yellowstone Park
chemical analyses of mud from 414
clay mineral formation in mud pots in
409
location and description of samples in
mud pots in 420
spectrographic data of mud from 415

ZEN, E-an: Application of one dimen-
sional lattice model to mixed-layer
muscovite-montmorillonite 49

Zeolite
deposits, natural, mineral analysis of
187
type A, formation of from halloysite
and allophane 185

Zeolites
Na-P, structural changes in 183
symposium on 181
